

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application.

**Listing of Claims:**

1. (Currently Amended) A plasma display apparatus including:

(A) a panel section including:

(A-1) a first board having a plurality of scanning electrodes and sustain electrodes in pairs; and

(A-2) a second board having data electrodes which cross the scanning electrodes and the sustain electrodes, and faced the first board; and

(B) a driver for outputting a driving voltage for driving the panel section,

the plasma display apparatus comprising:

(a) a sustaining period when a sustaining pulse is alternately applied to the scanning electrodes and the sustain electrodes for keeping discharge; and

(b) an erasing period when a ramp voltage pulse whose polarity differs from polarity of the sustaining pulse is applied to one of said scanning or sustain electrodes ~~an electrode~~, which differs from ~~an electrode~~ another of said scanning or sustain electrodes where a last pulse of the sustaining pulse is applied.

2. (Original) The plasma display apparatus of claim 1,

wherein the last pulse of the sustaining pulse is positive, and

a minimum voltage  $V_{nr}$  of the ramp voltage pulse, which is applied in the erasing period, has a following relation for a discharge-starting voltage  $V_{f1}$  between an electrode where the ramp voltage pulse is applied and one of the data electrodes.

$$-(V_{f1} - 60) \leq V_{nr} \leq -30 \quad (\text{V of units})$$

3. (Original) A plasma display apparatus including:

(A) a panel section including:

(A-1) a first board having a plurality of scanning electrodes and sustain electrodes in pairs; and

(A-2) a second board having data electrodes which cross the scanning electrodes and the sustain electrodes, and faced the first board; and

(B) a driver for outputting a driving voltage for driving the panel section,

the plasma display apparatus comprising:

a sustaining period when a sustaining pulse is alternately applied to the scanning electrodes and the sustain electrodes for keeping discharge,

wherein a voltage  $V_{sh}$  of a last pulse of the sustaining pulse has a following relation for a voltage  $V_{st}$  of the sustaining pulse before the last pulse and a discharge-starting voltage  $V_{f2}$  between one of the scanning electrodes and one of the sustain electrodes.

$$V_{st} \leq V_{sh} < V_{f2}$$

4. (Original) The plasma display apparatus of claim 3,

wherein the voltage  $V_{sh}$  of the last pulse of the sustaining pulse has a following relation for the discharge-starting voltage  $V_{f2}$  between the scanning electrode and the sustain electrode.

$$(V_{f2} - 50) \leq V_{sh} < (V_{f2} - 30) \quad (\text{V of units})$$

5. (Original) A plasma display apparatus including:

(A) a panel section including:

(A-1) a first board having a plurality of scanning electrodes and sustain electrodes in pairs; and

(A-2) a second board having data electrodes which cross the scanning electrodes and the sustain electrodes, and faced the first board; and

(B) a driver for outputting a driving voltage for driving the panel section,

the plasma display apparatus comprising:

a sustaining period when a sustaining pulse is alternately applied to the scanning electrodes and the sustain electrodes for keeping discharge,

wherein a pulse width  $ts_2$  of a last pulse of the sustaining pulse is wider than a pulse width  $ts_1$  of the sustaining pulse before the last pulse.

6. (Original) The plasma display apparatus of claim 5,

wherein the pulse width  $ts_2$  of the last pulse of the sustaining pulse has a following relation for the pulse width  $ts_1$  of the sustaining pulse before the last pulse.

$$(ts_1 + 2) \leq ts_2 \leq 20 \quad (\mu s \text{ of units})$$

7. (Original) The plasma display apparatus of claim 3 further comprising:

an erasing period after the sustaining period,

wherein the erasing period is a period when a ramp voltage pulse whose polarity differs from polarity of the last pulse of the sustaining pulse in the sustaining period is applied to an electrode, which differs from an electrode where the last pulse of the sustaining pulse is applied.

8. (Original) The plasma display apparatus of claim 5 further comprising:

an erasing period after the sustaining period,

wherein the erasing period is a period when a ramp voltage pulse whose polarity differs from polarity of the last pulse of the sustaining pulse in the sustaining period is

applied to an electrode, which differs from an electrode where the last pulse of the sustaining pulse is applied.

9. (Original) The plasma display apparatus of claim 1,

wherein a slope of the ramp voltage pulse in the erasing period ranges from 0.5 V/ $\mu$ s to 20 V/ $\mu$ s.

10. (Original) The plasma display apparatus of claim 3 further comprising:

an erasing period when a ramp voltage pulse whose polarity differs from polarity of the sustaining pulse is applied to an electrode, which differs from an electrode where the last pulse of the sustaining pulse is applied,

wherein a slope of the ramp voltage pulse in the erasing period ranges from 0.5 V/ $\mu$ s to 20 V/ $\mu$ s.

11. (Original) The plasma display apparatus of claim 5 further comprising:

an erasing period when a ramp voltage pulse whose polarity differs from polarity of the sustaining pulse is applied to an electrode, which differs from an electrode where the last pulse of the sustaining pulse is applied,

wherein a slope of the ramp voltage pulse in the erasing period ranges from 0.5 V/ $\mu$ s to 20 V/ $\mu$ s.
